## Description

This document provides information about each software release, what has been changed since the last release, and any known issues. For information on how to install and use the software, please refer to the Quick Install Guide and User Manual respectively. Thank you.

## Changes

### Version 1.3.0.4

This is the premier release for the Silicon Image SATAraid5 Storage Solution for Macintosh. The current versions of the different components are:

Component	Filename	Version
Driver	Si3124r5.kext	1.3.0.4
Manager	SATAraid5Manager	1.0.1.9

## Known Issues in this Release

The following issues are known to exist in this version.

Item	Description	Solution
1	Occasionally on Macintosh systems, the system will experience problems resuming from a sleep state	The problem can be recovered by powering off the system and rebooting. This problem has not been seen to occur if the "Allow Power Button to Sleep the Computer" option is disabled in the Energy Saver -> Options -> Wake Options section of the System Preferences.
2	Under certain error conditions, the Manager may ask the user to input an IP address to access the machine.	Enter either the local IP address (preferred - 127.0.0.1) or an IP address as shown in <i>ifconfig</i> .
3	If a Create RAID Group option is cancelled while in progress, the create process may restart on the next power up if the disks have not been used to create another RAID Group.	The undesired Create RAID Group task can be cancelled. If the disks are used to create another RAID Group, this problem should not occur.

These issues are expected to be fixed in the next release.
