

Dupehunter Professional SpeedOpt® Information

After using Dupehunter Professional for a while, the thought has probably occurred to you that it would be nice if your searches would not take quite so long. Right?

Your wish has been granted! And the answer to your wish carries the name **SpeedOpt®**.

- With the **SpeedOpt®** option, you can process **3,400 MP3 files** totaling 16 gigabytes in size **in one and a half minutes**.
- Thanks to **SpeedOpt®**, you can analyze up to **95 gigabytes** (180,000 files) or whole partitions, including application data, programs, and system files **within one hour**.
- Thanks to **SpeedOpt®**, your digital image files, including CAD drawings and any other data, can be processed in a fraction of time previously required.
- On a **100-megabit network connection**, you can evaluate **8 gigabytes of data within 15 minutes**.

(These numbers are based on a 3.2 GHz processor.)

Sound good?

And what exactly is SpeedOpt®?

SpeedOpt® is a new process developed by Carsten Heidtke Software that can process files in a fraction of the time previously required, so that much greater amounts of data can be analyzed.

An added bonus of this technique is that less strain is placed on the network, since less data needs to be transmitted.

Is it secure?

We have developed thorough safeguards that ensure that this process is just as secure as any other process now in use. You are also free to choose which algorithm to use (CRC-32, MD5 or SHA-1), just as before. This option can also be set on or off as you like, letting you compare the results with other methods. And by using the additional binary Byte-to-Byte comparison you will get the maximum security.

Who can use SpeedOpt®?

Technical advances require investments in research and development that needs to be financed. Therefore, **SpeedOpt®** is available only to licensees of the **Corporate Edition**.

The price?

For a premium of 30 Euros over the Business Edition, or a total of €49.95 (including VAT where applicable), the Corporate Edition pays for itself in reduced labor costs after one, or maybe two, searches. The payback is almost immediate. For current customers, attractive upgrade prices are available. Find out more on our home page, <http://www.dupehunter.com>.

Looking into the future:

Please consider that after a **one-time** payment for the Corporate Edition, you will, of course, receive all future updates at no cost, ensuring that you will benefit from all future enhancements. If you already hold a Corporate Edition license, you will be happy to know that this new technology is available to you at no extra cost.

Now, one last suggestion:

Please refer to our website for added documentation and comparisons that will show you all the features of the various editions, and let you make an informed choice. Read about our new Premium Support plan, and searching with the use of regular expressions, secure deletion using Gutmann and DoD 5220.22-M, or the extremely secure SHA-1 standard.
